

Management of electricity network infrastructure involves work that is skilled, complex and potentially hazardous. People and equipment can be put at risk if safety is not foremost in our thinking. The protection of people and the environment is considered in every decision we make, and in every action

WE ARE COMMITTED TO:

- Enabling an engaged workforce
- Ensuring workloads and resources are actively balanced
- Providing a safe and healthy work environment for our workers
- Supporting our people to stop work and pause for safety when someone feels unsafe
- Contributing as individuals to a culture where safety comes before keeping the lights on
- Ensuring the electricity networks that we manage do not put communities and people at risk
- Specifying, Implementing and Monitoring critical controls for risk that will seriously harm people

ACHIEVING OBJECTIVES THROUGH:

- Managing activities with potentially serious outcomes through the implementation of Critical Controls
- Ensuring our vehicles, plant and equipment are fit for purpose, well maintained, and safe for use
- Engaging our people through leadership, consultation, communication and partnerships
- Having well trained people that understand what they do and how they do it
- Collaborate with industry to enhance and improve safety standards
- Engaging with the public to increase their awareness of risks
- Implementing effective systems, process and procedures
- Continually striving for safer workplaces and networks

SUPPORTED AND ENDORSED BY POWNET AND NETWORK SAFETY LEADERS

Don Nicolson
PowerNet Chair

Lynley Hall
PowerNet H &S Committee Chair

Joe O'Connell
PowerNet HSE Board Committee Chair

Doug Fraser
The Power Company Chair

Jason Franklin
PowerNet Chief Executive

Duncan Fea
OtagoNet Joint Venture Chair

Justin Peterson
PowerNet HSE General Manager

Tom Campbell
Electricity Invercargill Chair
