

## **Cleaning Equipment / Tools**

The COVID-19 virus lives on surfaces for at least 12 hours.

As COVID 19 is spread by droplet transfer, we need to be vigilant about cleaning surfaces where the droplets may have landed. This is to avoid picking it up on our hands and transferring it to our faces particularly, eye, nose and mouth. (Droplets can be spread by things like coughing, sneezing, sweating, shaking hands and close personal contact).

### **To clean Equipment / Tools, please:**

- On return to Depot at end of day, clean shared tools and equipment with bleach (e.g. Janola), disinfectant wipes, solution spray and chux cloths.
  - e.g. Remote controls, tool box or canopy handles and any other surfaces that virus droplets could have landed on.
  - Instructions on how to make up the bleach solution is attached to the spray bottles.
- Always ensure chux cloth is discarded after use, then wash/clean hands.
