

## Cleaning Vehicles

The COVID-19 virus lives on surfaces for at least 72 hours.

As COVID-19 is spread by droplet transfer, we need to be vigilant about cleaning surfaces where the droplets may have landed. This is to avoid picking it up on our hands and transferring it to our faces particularly, eye, nose and mouth. (Droplets can be spread by things like coughing, sneezing, sweating, shaking hands and close personal contact).

### To clean the vehicle, please:

- Use wet wipes.
- Clean between users and /or at lunch and at the end of the day.
- Clean steering wheel, dashboard, gear shift, door handles inside and out, seat belt clips etc.
- Clean any other surface that is touched regularly by multiple persons – such as the dashboard or radio controls.
- Ensure wet wipes are discarded after use in the rubbish, then wash/clean hands.
